Steel platform galvanised

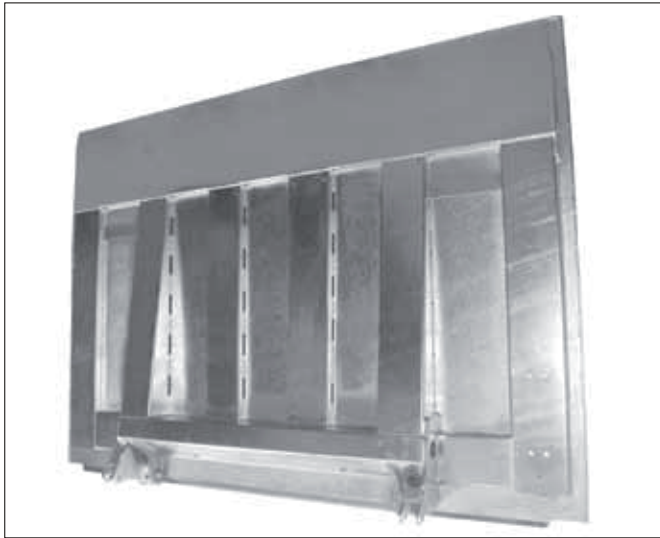

- ✓ When doing extremely demanding work
- ✓ Easy to repair
- ✓ Hot-dip galvanised, optimum protection against corrosion inside and outside, patent pending

Hot-dip galvanised steel platform

The requirements put on tail-gate lifts in modern logistics are becoming more and more demanding.

The loading of heavy pallets, electric lift trucks, 5 roller containers per lifting operation, the use of the tail-gate lift as a loading ramp,

...the platform is subject to the heaviest loads and is sometimes overloaded.

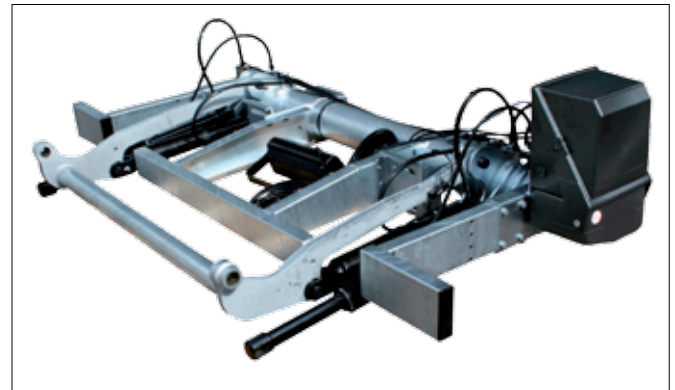

The hot-dip galvanised steel platform is available for the **DAUTEL LIFTER** DL 1500S to DL 3000S.

The following platform heights are available: 1800 mm, 2100 mm, 2200 mm, 2300 mm and 2400 mm.

The durable **DAUTEL** steel platform is the optimal alternative, which with its high-rated load can even manage extraordinary demands.

- Optimum protection against corrosion, even in the cavities thanks to HOT-DIP GALVANISING (patent pending).
- Can be used without painting and is provided with additional pre-treatment and top coating on request.
- Bolted sheet aluminium for your advertising.
- Highly durable and warp-resistant.
- Easy to repair.
- Optional drop-down protector for 2 roller containers (wheel Ø 120 mm), 1000 mm wide.
- Only approx. 150 kg heavier than the comparable aluminium platform (approx. 1800 mm height).
- The anti-slip feature is classified as permanent in accordance with DIN 51130, R11 in all directions.

The ideal addition to the hot-dip galvanised steel platform is the optional **DAUTEL LIFTER** hoist gear which has proven itself over many years. The support pipe, lifting arm, suspension plates and under-run guard are hot-dip galvanised.
